

Abstract of the Disclosure

An audio transmitter and remote control unit receiver and storage apparatus for transmitting audio signals from electronic equipment, such as a television set, to individuals remotely located therefrom includes an audio transmitter for disposition adjacent to the electronic equipment and an audio receiver and remote control unit storage case positioned remotely from the electronic equipment. The audio transmitter having electronic circuitry for receiving audio transmissions from the electronic equipment and an audio antenna or IR sender for transmitting audio signals to remote locations. The audio receiver and remote control unit storage case having a floor and a pair of opposed sidewalls forming a receptacle for holding therein a remote control unit, a receiver antenna or IR detector for detecting audio signals conveyed from the audio transmitter, and an audio output speaker for broadcasting audio conveyed from the electronic equipment to the adjacently positioned individual.
